GENERAL INFORMATION

Product Description for Equipment under Test (EUT)

The *M-Labs Technologies, LLC's* product, model number: *LTE (FCC ID: 2AAQ6MLTE001T, marketing name: T5000)* in this report is a *GPS Tracker* which was measured approximately: $105 \text{ mm (L)} \times 47 \text{ mm (W)} \times 13 \text{ mm (H)}$, rated with input voltage: DC 12 V.

Report No.: RSZ170322005-00B

Notes: This series products model: LTE, LTE-B, LTE-B-BA and LTE-BA are identical schematics and only are different for model name. Model LTE was selected for fully testing, the detailed information can be referred to the attached declaration which was stated and guaranteed by the applicant.

* All measurement and test data in this report was gathered from production sample serial number: 1700473 (Assigned by BACL, Kunshan). The EUT supplied by the applicant was received on 2017-03-22.

Objective

This test report is prepared on behalf of *M-Labs Technologies*, *LLC* in accordance with Part 2-Subpart J, Part 24-Subpart E and Part 27 of the Federal Communication Commissions rules.

The objective is to determine the compliance of the EUT with FCC rules for output power, modulation characteristic, occupied bandwidth, and spurious emission at antenna terminal, spurious radiated emission, frequency stability and band edge.

Related Submittal(s)/Grant(s)

No related submittal.

Test Methodology

All tests and measurements indicated in this document were performed in accordance with the Code of Federal Regulations Title 47 Part 2-Subpart J as well as the following parts:

Part 24 Subpart E - Personal Communication Services Part 27 – Miscellaneous wireless communications services

Applicable Standards: TIA/EIA 603-D, ANSI C63.4-2014.

All emissions measurement was performed at Bay Area Compliance Laboratories Corp. (Kunshan). The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

FCC Part 24E/27 Page 3 of 15

Measurement Uncertainty

| | Item | Uncertainty |
|-------------------|----------------------|-------------|
| RF conducte | d test with spectrum | ±0.9dB |
| RF Output Pov | wer with Power meter | ±0.5dB |
| Radiated emission | 30MHz~1GHz | ±5.91dB |
| Radiated emission | Above 1G | ±4.92dB |
| Occupi | ed Bandwidth | ±0.5kHz |
| Te | mperature | ±1.0℃ |
| Н | Iumidity | ±6% |

Report No.: RSZ170322005-00B

Test Facility

The test site used by Bay Area Compliance Laboratories Corp. (Kunshan) to collect test data is located on the No.248 Chenghu Road, Kunshan, Jiangsu province, China

Test site at Bay Area Compliance Laboratories Corp. (Kunshan) has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on November 06, 2014. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.4-2014.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 815570. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

FCC Part 24E/27 Page 4 of 15

SYSTEM TEST CONFIGURATION

Description of Test Configuration

The EUT was configured for testing according to TIA/EIA-603-D.

The final qualification test was performed with the EUT operating at normal mode.

Equipment Modifications

No modification was made to the EUT.

FCC Part 24E/27 Page 7 of 15

^{*} **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

FCC§15.247 (i), §1.1307 (b) (1) & §2.1091 –Maximum Permissible exposure (MPE)

Applicable Standard

According to subpart 15.247 (i) and subpart 1.1307 (b)(1), 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Limits for General Population/Uncontrolled Exposure

Report No.: RSZ170322005-00B

| | Limits for General Population/Uncontrolled Exposure | | | | | | | | | | | | |
|-----------------------------|---|-------------------------------------|-------------------------------------|--------------------------------|--|--|--|--|--|--|--|--|--|
| Frequency Range (MHz) | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm ²) | Averaging Time (Minutes) | | | | | | | | | |
| 0.3-1.34 | 614 | 1.63 | *(100) | 30 | | | | | | | | | |
| 1.34-30 | 824/f | 2.19/f | $*(180/f^2)$ | 30 | | | | | | | | | |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 | | | | | | | | | |
| 300-1500 | / | / | f/1500 | 30 | | | | | | | | | |
| 1500-100,000 | / | / | 1.0 | 30 | | | | | | | | | |

f = frequency in MHz

MPE Calculated:

Predication of MPE limit at a given distance

$$S = \frac{PG}{4\pi R^2}$$

S = power density (in appropriate units, e.g. mW/cm2)

P = power input to the antenna (in appropriate units, e.g., mW).

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain.

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm)

MPE Results

Tune-Up Power Including Tolerance:

| Frequency | Antenna Gain | | Max Tune | -up Power | Evaluation | Power | MPE Limit |
|---------------|--------------|-----------|----------|-----------|------------------|-------------------------------|-----------------------|
| (MHz) | (dBi) | (numeric) | (dBm) | (mW) | Distance (cm) | Density (mW/cm ²) | (mW/cm ²) |
| 701.5-713.5 | 1.32 | 1.36 | 23.29 | 213.30 | 20 | 0.06 | 0.47 |
| 1712.5-1752.5 | 1.39 | 1.38 | 23.38 | 217.77 | 20 | 0.06 | 1.0 |
| 1852.5-1907.5 | 1.61 | 1.45 | 23.28 | 212.81 | 20 | 0.06 | 1.0 |

Note: To maintain compliance with the FCC's RF exposure guidelines, place the equipment at least 20cm from nearby persons.

Result: Compliance

FCC Part 24E/27 Page 8 of 15

^{* =} Plane-wave equivalent power density

FCC §2.1047 - MODULATION CHARACTERISTIC

According to FCC \S 2.1047(d), Part 24E & Part 27 there is no specific requirement for digital modulation, therefore modulation characteristic is not presented.

Report No.: RSZ170322005-00B

FCC Part 24E/27 Page 9 of 15

FCC § 2.1046, § 24.232 (c); §27.50 (c) (d) - RF OUTPUT POWER

Applicable Standard

According to FCC §2.1046 and §24.232 (c), mobile and portable stations are limited to 2 watts EIRP and the equipment must employ a means for limiting power to the minimum necessary for successful communications.

Report No.: RSZ170322005-00B

According to \$27.50(d), the maximum EIRP must not exceed 1Watts (30dBm) for 1710-1755MHz. The peak-to-average power ratio (PAPR) of the transmitter output power must not exceed 13 dB.

According to §27.50(c), Portable stations (hand-held devices) in the 600 MHz uplink band and the 698-746 MHz band, and fixed and mobile stations in the 600 MHz uplink band are limited to 3 watts ERP.

Test Procedure

Conducted method:

The RF output of the transmitter was connected to the CMW500 through sufficient attenuation.

Radiated method:

TIA 603-D section 2.2.17

Note:

All above data were tested with no amplifier Absolute Level = SG Level - Cable loss + Antenna Gain Margin = Limit- Absolute Level

Conducted output power at antenna, please refer to the modulle certification (FCC ID: 2AAGMUS130Q)

FCC Part 24E/27 Page 13 of 15

FCC § 2.1053;§ 24.238 (a); §27.53 (h)(m) SPURIOUS RADIATED EMISSIONS

Applicable Standard

FCC § 2.1053, § 24.238(a) and § 27.53(h)(m)

For mobile digital stations, the attenuation factor shall be not less than $40 + 10 \log (P) dB$ on all frequencies between the channel edge and 5 megahertz from the channel edge, $43 + 10 \log (P) dB$ on all frequencies between 5 megahertz and X megahertz from the channel edge, and $55 + 10 \log (P) dB$ on all frequencies more than X megahertz from the channel edge, where X is the greater of 6 megahertz or the actual emission bandwidth as defined in paragraph (m)(6) of this section. In addition, the attenuation factor shall not be less that $43 + 10 \log (P) dB$ on all frequencies between 2490.5 MHz and 2496 MHz and $55 + 10 \log (P) dB$ at or below 2490.5 MHz. Mobile Satellite Service licensees operating on frequencies below 2495 MHz may also submit a documented interference complaint against BRS licensees operating on channel BRS Channel 1 on the same terms and conditions as adjacent channel BRS or EBS licensees.

Report No.: RSZ170322005-00B

Test Procedure

The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load which was also placed on the turntable.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the receiving antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis

The frequency range up to tenth harmonic of the fundamental frequency was investigated.

Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the spurious emissions were measured by the substitution.

Spurious emissions in $dB = 10 \lg (TX \text{ pwr in Watts}/0.001)$ – the absolute level

Spurious attenuation limit in $dB = 43 + 10 \text{ Log}_{10}$ (power out in Watts)

Spurious attenuation limit in $dB = 55 + 10 \text{ Log}_{10}$ (power out in Watts)

Test Data

Environmental Conditions

| Temperature: | 25 ℃ |
|--------------------|-----------|
| Relative Humidity: | 46 % |
| ATM Pressure: | 101.0 kPa |

The testing was performed by Layne Li on 2017-04-13.

EUT operation mode: transmitting
